

Someone buying less electricity because of solar is not paying their **FAIR SHARE** of electric delivery system based on peak usage.

Fixed Cost Recovery Charge Collects **FIXED COSTS**

The Solar Fixed Cost Recovery Charge ensures each customer pays his or her share of the infrastructure costs required to serve them at the peak hour and all the hours in the year. Without the Charge, members that install solar generation avoid paying all of the costs incurred to serve them and those costs are passed on to other members.
